

John Henderson

Objective	Senior IT position using 10+ years experience within network project management and administration		
Experience	1999–present	ABC Corporation	Dogwood, TN
	Technical Services Specialist		
	Recruited by small software company to define, design, and implement customer support department. Delegated to create and institute training program, define certification process for company's network configuration, and develop software manufacturing and testing process for release of software products		
	▪ Increased sales from \$50 million to \$100 million. ▪ Doubled sales per representative from \$5 million to \$10 million. ▪ Suggested new products that increased earnings by 23%..		
	* Created database and documentation necessary to track and resolve client problems. Eliminated common problems by redesigning training material. * Standardized configurations for partner company's sales staff. * Formalized software manufacturing and testing processes. * Upgraded network structure to eliminate single point of failure processes. * Implemented backup, disaster recovery, and anti-virus programs.		
	1995–1999	XYZ Company	Memphis, TN
	Information Tech Specialist		
	Utilized diagnostic tools to evaluate and upgrade department's disaster recovery plan, upgrade anti-virus program, and document network infrastructure to ensure business continuity. Managed and administered two NT servers and maintained 65 workstations in LAN/WAN system with multiple network operating systems, protocols, and platforms.		
	*Documented the current network infrastructure.		
	*Designed and expanded disaster recovery plan to include vendors for remote site recovery.		
	* Reduced downtime by 10% by educating client base.		
	1989–1995	DDD Corporation	Dogwood, TN
	LAN Administrator III		
	Managed and administered 16 servers and 350 workstations in complex LAN/WAN system with multiple network operating systems.		

- * Reduced network downtime from 15% to less than 2% by designing, managing, and implementing network migration project (MS Project tools).
- * Performed significant upgrades, including IBM 9595s to RAID5-configured IBM 7000s, OS/2 to NT 4.0, and NetBEUI to TCP/IP, while remaining transparent to client base.
- * Designed and implemented disaster recovery project based on Veritas software and DLT hardware, eliminating single point of failure issues and automating the process.
